

Toxic substances

The heatmap displays the percentage of the population that is European for the 100 largest countries by population. The countries are listed on the y-axis: IN, US, CH, CA, EU, and BR. The x-axis represents population rank from 1 to 105. The color scale ranges from 0% (lightest) to 100% (darkest). The data shows that countries with higher European populations (like IN, US, CH, CA, EU, and BR) generally have a higher percentage of European population, while countries with lower European populations (like IN, US, CH, CA, EU, and BR) have a lower percentage.
